PROFESSIONAL SUMMARY

Full Stack Developer and Software Engineering student (UFC) driven by the challenge of building real and scalable solutions. I have strong experience in creating Backend architectures (Java, Node.js) and modern interfaces (React, Next.js), as well as deep experience in integrating with Web3 and Blockchain ecosystems (Stellar, SUI). As an academic researcher and competitor in global Hackathons, I apply Generative AI and LLMs to create autonomous systems. I value strong roots, clean code, and an extreme focus on solving the client's problem.

TECHNICAL SKILLS AND COMPETENCIES

- Backend & Architecture: Java (Spring Boot), Node.js (Nest.js, Express), Python, C# (.NET).
- Modern Frontend: JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, Chakra UI.
- Web3 and Blockchain: Smart Contracts, Rust, Stellar ecosystem (Soroban) and SUI.
- Data and DevOps: Relational Databases (PostgreSQL, MySQL), NoSQL (MongoDB), Docker, CI/CD, Git/GitHub.
- Quality and Methodologies: Clean Code, Unit Testing (QA), Performance Troubleshooting, Scrum.

PROFESSIONAL EXPERIENCE

Full Stack Developer – Ideadutec (EdTech) - April 2026 – Present

- Responsible for implementing complex dashboards and reporting systems using Next.js, TypeScript, and Chakra UI.
- Proactively identifying performance bottlenecks in legacy routes, leading processing migrations from the client-side to the server-side.
- Direct interface with the Backend team (Nest.js, PrismaORM, PostgreSQL, Docker) for defining new API contracts and data architecture focused on Analytics.

Software Development Monitor (Web and Mobile) - Federal University of Ceará - March 2026 - Present

- Leadership in Code Review sessions and enforcement of Unit Tests and Clean Code requirements in complex Full Stack and Mobile academic projects.
- Instruction for classes in the practical use of LLMs and Generative AIs for code refactoring and structuring modern architectures.

Junior Full Stack Developer (Temporary) - Switch Pay October 2025 to December 2025

- I optimized dynamic interfaces for financial dashboards in a highly critical environment.
- I participated in Agile (Scrum) ceremonies, optimizing the continuous integration (CI/CD) flow and ensuring usability and seamless integration with APIs (JavaScript and Java ecosystem).

Junior Front-End Developer - Brazil Courses - February 2025 to February 2026

- I built reusable components and modern interfaces using React and TypeScript, focusing on high loading performance and UX.
- I developed routines for the efficient and structured consumption of RESTful APIs.

IT Intern - Earned Cash Back - September 2021 to December 2021

- I performed rigorous manual testing and actively contributed to the technical documentation of web solutions.

FEATURED PROJECTS AND HACKATHONS

SyloPay (Web3 / Blockchain)

- BNPL (Buy Now, Pay Later) platform built on the Stellar blockchain. I built the back-end infrastructure using NestJS, Stellar SDK, and PostgreSQL. (Competitor in a Global Hackathon with a \$50,000 prize pool).
- Repository: <https://github.com/Sylopay/sylopay>

ChainMed (Full Stack)

- A system that revolutionizes the way doctors prescribe medications, ensuring the security and immutability of data through blockchain technology (React, TypeScript, Tailwind).
- Repository: <https://github.com/josiasdev/ChainMed>

OrderMS - Microservices and Messaging

- I developed an end-to-end distributed architecture using Java 21, Spring Boot, and RabbitMQ for asynchronous messaging, isolating the MongoDB database with Docker.
- Repository: <https://github.com/josiasdev/orderms>

Pecém Bridge: IA-RET (Artificial Intelligence and Governance)

- I created an audit agent that uses Operations Research to select candidates based on technical merit, while respecting governance constraints and limitations on political appointments (Python).
- Repository: <https://github.com/josiasdev/ponte-pecem-ia-ret>

Academic background

- Bachelor's Degree in Software Engineering - Federal University of Ceará (UFC) - Expected Completion: December 2027
- Computer Technician - EEEP Dr. Salomão Alves de Moura - Completed in 2021
