Professional Summary

Software Engineering student (UFC) and Full Stack Developer driven by the challenge of building real, scalable solutions. Solid experience in designing robust **Backend** architectures using **Java (Spring Boot)** and **Node.js**, alongside modern interfaces with **React** and **Next.js**. Deep expertise in integrating innovative **Web3** and **Blockchain (Stellar, SUI)** ecosystems. As an academic researcher and global Hackathon competitor, I apply **Generative AI** and **LLMs** to build autonomous systems. I value strong fundamentals, **Clean Code**, and an extreme focus on solving customer problems.

Technical Skills & Competencies

- **Backend & Architecture:** Java (Spring Boot, Spring Data JPA, Spring Security), Node.js (NestJS, Express), Python, C# (.NET), Microservices, Event-Driven Architecture.
- **Modern Frontend:** JavaScript (ES6+), TypeScript, React.js, Next.js (SSR/SSG), Tailwind CSS, Chakra UI.
- **Web3 & Blockchain:** Smart Contracts, Rust, Stellar Ecosystem (Soroban Platform), SUI Blockchain, Stellar SDK.
- **Data & DevOps:** Relational Databases (PostgreSQL, MySQL), NoSQL (MongoDB), Docker, Containers, CI/CD Pipelines, Git/GitHub Advanced Workflow.
- **Quality & Methodologies:** Clean Code, Unit Testing (QA), Performance Troubleshooting, Agile Methodologies (Scrum).

Professional Experience

Full Stack Developer — Ideedutec (EdTech)

April 2026 – Present

- Implemented complex analytical dashboards and dynamic reporting systems using **Next.js**, **TypeScript**, and **Chakra UI**.
- Proactively identified performance bottlenecks in legacy routes, leading critical processing migrations from Client-side to Server-side (SSR).
- Collaborated directly with the Backend engineering team (**NestJS**, **PrismaORM**, **PostgreSQL**, **Docker**) to design new RESTful API contracts and a data architecture focused on Analytics.

Software Development Teaching Assistant (Web and Mobile) — Federal University of Ceará

March 2026 – Present

- Provided technical leadership in Code Review sessions, enforcing high **Clean Code** standards and **Unit Testing** coverage in complex Full Stack and Mobile academic projects.
- Instructed classes on the practical and strategic use of **LLMs** and **Generative AI** tools for code refactoring, scope acceleration, and structuring modern architectures.

Junior Full Stack Developer (Temporary) — Switch Pay

October 2025 – December 2025

- Optimized dynamic interfaces for highly critical financial dashboards, ensuring reduced response times and high usability (UX).
- Participated in Agile ceremonies (**Scrum** framework), refining the continuous integration and delivery (**CI/CD**) pipeline and ensuring seamless API integration across JavaScript and **Java** ecosystems.

Junior Front-End Developer — Brasil Cursinhos

February 2025 – February 2026

- Built reusable, high-performance, and scalable components with **React** and **TypeScript**, significantly reducing page load times.
- Developed robust routines for the efficient and structured consumption of RESTful APIs, with proper state management and data concurrency handling.

IT Intern — Lucrei Cash Back

September 2021 – December 2021

- Executed rigorous manual and functional testing routines to ensure Quality Assurance (QA) across web platforms.
- Created and actively maintained technical software documentation to streamline the onboarding process for new developers.

Featured Projects & Hackathons

SyloPay (Web3 / Blockchain) — *NestJS, Stellar SDK, PostgreSQL, Rust, Soroban* [\[GitHub\]](#)

- Decentralized BNPL (Buy Now, Pay Later) platform built directly on the Stellar blockchain.
- Responsible for the entire **Backend** infrastructure and architecture. Developed for a Global Hackathon with a total prize pool of US\$ 50,000.

OrderMS – Microservices and Messaging — *Java 21, Spring Boot, RabbitMQ, MongoDB, Docker* [\[GitHub\]](#)

- End-to-end distributed architecture built to simulate order processing at production scale.
- Utilized asynchronous messaging with **RabbitMQ** and data isolation using a **MongoDB** document-oriented database embedded via Docker.

ChainMed (Full Stack) — *React, TypeScript, Tailwind CSS, Blockchain* [\[GitHub\]](#)

- Innovative digital health system that revolutionizes medical prescription governance, ensuring total immutability and traceability using blockchain technology.

Ponte do Pecém: IA-RET (Artificial Intelligence and Governance) — *Python, Operations Research* [\[GitHub\]](#)

- Intelligent auditing agent employing Operations Research models to rank and select candidates based strictly on technical merit, shielding the process from external political appointments.

Academic Background

Bachelor's Degree in Software Engineering

Federal University of Ceará (UFC) – Quixadá Campus

Expected Graduation: December 2027

Information Technology Technician

EEEP Dr. Salomão Alves de Moura

Completed in 2021
